

# Crimes or Cover Up Exposing the World's Most Dangerous Lie

Mon, 12/13 8:51PM • 2:01:10

## SUMMARY KEYWORDS

wuhan, vaccine, nih, shi, government, lab, research, virus, china, email, pandemic, questions, people, chalkboard, chinese, happening, function, gain, public private partnerships, scientists

## SPEAKERS

Jason, Sen Rand Paul, Dr Ryan Cole, Steve Deace, Robert De Niro (Meet the Parents), David Relman, News 3, News 2, News 1, Glenn Beck, Speaker Unknown, Bill Gates, Dr Anthony Fauci, Ralph Baric

### News 1 00:02

A SARS like virus has now reached the United States.

### News 2 00:05

[Did] this really came from market that sold seafood

### News 3 00:08

Put the mask back on.

### Glenn Beck 00:09

I want to tell you a little something about trust. It may be the most important thing you can have in this life.

### Robert De Niro (Meet the Parents) 00:15

Have I not clearly explained the circle of trust to you Greg.

### Glenn Beck 00:19

No trust, no healthy relationships. No trust, you're paranoid at work. No trust in God, no faith. No trust, and every institution will crumble. We've lost trust. All of it. And not just in America. Throughout the entire damn world. And it's really no mystery why. They lied to us over and over and over and over and over again.

### Dr Anthony Fauci 00:44

The NIH has not ever and does not now fund gain of function research.

### Glenn Beck 00:51

We didn't give them this much power. They took it with all those lies, and they still are. We did fight back.

**Speaker Unknown** 00:58

We may not agree with them, but the rules are the rules.

**Glenn Beck** 01:00

And we still are.

**Speaker Unknown** 01:02

FDNY personnel who oppose the mandate are making their feelings known.

**Glenn Beck** 01:07

But they have so much control with blackmail, lies, manipulation, money. Their slimy evil tentacles are wrapped around every institution every avenue that could possibly lead us to truth. Every avenue, but this one. We're just one of the few that refuse to submit, refuse to bend the knee refuse to let this COVID catastrophe go unanswered. Because without trust, this nation fails. And the only way to restore trust is with a little bit of truth.

**Dr Anthony Fauci** 01:45

It makes me very uncomfortable to have to say something but he is egregiously incorrect in what he says thank you.

**Sen Rand Paul** 01:53

History will figure that out on its own.

**Glenn Beck** 01:56

Truth is the only way to restore this nation, and to restore every fibre of freedom that runs through. So tonight, we expose the truth of what happened. Not only the origin, the moves, the players involved in this entire pandemic narrative that is destroying us. But we'll show you the cover up of all of it as well. Tonight, Crimes or Cover-Up: Exposing The World's Most Dangerous Lie. Hello America. Fifteen days to flatten the curve. Do you remember that? It was a different world back then. I think all wanted to do the right thing. We didn't know what we were dealing with at the time. We saw the leaked videos from China that was, you know, showing soldiers locking people in their houses and drones ordering people home and the overflowing hospitals. It was a scary time.

**Glenn Beck** 03:03

What's happened since. Fifteen days has now turned into 612 days. And the curve has long been flattened. We've gone from we have to flatten the curve to we have to get herd immunity to we have to have a vaccine. All of those things seemed impossible, [but] now we have a vaccine and it's still going on. The real problem here is we've stopped trusting one another. When did that happen to us? I know we might disagree. You might be watching this now with a friend who says I hate Glenn Beck. That's fine. But I think if you would listen and we had an opportunity to talk like we do now, I think you'd see we have a lot more in common. I don't have a problem with the vaccine, I have a problem with

everything I want to show you tonight. We've had people now chasing others down in public shouting at them to put on a mask. We've had local governments encouraging neighbours to inform on one another. This is the Stasi, it's not America. We now have politicians, federal agencies, big tech, corporate America all working together. It's the largest public private partnership since World War Two and it's underway and you don't know the half of it. Until tonight. We're not at war. They like to use war footing wording but that's just to perpetuate what they're building.

**Glenn Beck** 04:37

So when did things turn? This is why COVID more specifically the COVID origin story is so important to understand. Who was involved. Where did it come from? How did the pandemic begin? You know, would it be weird to find out that the people that are currently pushing the mandates and infinite booster shots were the exact same people who were working to create the vaccines years before the pandemic. But not only that, but listen to this from Dr. Fauci.

**Dr Anthony Fauci** 05:16

Senator Paul, with all due respect, you are entirely and completely incorrect, that the NIH has not ever and does not now, fund gain of function research in the Wuhan Institute.

**Sen Rand Paul** 05:33

Do they fund Dr Baric?

**Dr Anthony Fauci** 05:35

We do not fund -

**Sen Rand Paul** 05:37

Do you fund Dr Baric's gain of research?

**Dr Anthony Fauci** 05:40

Dr. Baric does not do in gain of function research.

**Glenn Beck** 05:45

He's pretty adamant. It's pretty clear. The US government was not and never has funded gain of function research. Is that true? Most people don't even know what gain of function is, we don't know. Makes it easy to cover things up if people don't know. You will know tonight. And all of the questions that you've had, I think will be answered by the end of this two hour broadcast commercial free. After this broadcast, we're going to do something special just on Blaze TV with Steve Deace, who has been following every thread of this pandemic. He's actually written a book on Anthony Fauci. If you have any questions about COVID, Fauci, the vaccine, or anything that you don't understand in today's episode, or you have questions that you wouldn't dare ask in public for fear of losing your job or some other insane form of societal retribution. You'll want to participate in the Blaze TV only Q&A with Steve, Daniel Horowitz, and Dr. Ryan Cole happening immediately after this show, only on the network. They're going to answer all of your questions from subscribers and the Blaze TV live chat if you have any throughout the special, use the promo code, FAUCILIED and get 25% off to join our too dangerous for big tech discussion, or if we happen to be pulled off of YouTube tonight. Steve is joining us now I

just wanted to, where is he? Steve, there you are. Steve, you read the script last week? You've written the book on Fauci. Can you give people that might be tuning in, because we're going to be going through so much information, any advice going in what to look for?

**Steve Deace 07:40**

My advice would be to have an open mind, and look for the context that ties all of these various threads together. Why does this never end? Why can't they tell us when it will end? Why can't they tell us what a success or win looks like, you said you know they want to use war footing war language here. Well you know what victory looks like in a war, right? The enemy surrenders. What does victory look like here? Why can't they give us those answers? It's because they're fighting a different war here than we think. They're not fighting a war against Coronavirus. They're fighting a war against our way of life and Coronavirus is the means by which they want to fight it. And we're going to expose that here tonight.

**Glenn Beck 08:20**

Okay. We'll talk to you a little later on in the programme. And then we look for your special in two hours. I know you have a couple of guests there that have not seen previews of what's on the chalkboard, and I'm anxious to hear what they say after the programme too. Thank you so much, Steve. We're going to try to do something that honestly even I haven't tried to do before with the chalkboard and didn't realise until about one o'clock this afternoon when we started putting everything up on the chalkboard. In fact, we had to bring in a big huge metal, see behind me these are all of the little magnets. I don't think we've ever, and when I was at Fox, I think that was the whole wall of magnets that we used for the whole thing. Those are the magnets that are gonna go on this smaller chalkboard and you're gonna get to know people intimately, and there's a few players and we'll try to take the time if we can to really introduce them so you see. Don't worry when you're watching tonight about getting every detail. There is a tonne of information coming your way. Just get the gist of it. You can go back and watch it on Blaze TV later, but just get the gist of it and don't worry, I will go back after we have all of the three segments of the chalkboards done. I will show you the full picture towards the end of the broadcast.

**Glenn Beck 08:40**

It is in three segments and the first segment is about war. And I want to show you The Vaccine Arms Race this is the first part of it. The goal has been to end COVID, SARS and all other deadly viruses and this is really important for you to understand. I think most people who were involved in this at the beginning, the scientists were trying to do the right thing. There was this idea of, we're going to be wiped out by a Coronavirus so why don't we go into all of the animal kingdom and test and see if we can get coronaviruses to go into humans without actually exposing any humans. We've used lab animals. It's very controversial. It could wipe out all of humanity if you make a mistake. That's what this is about The Vaccine Arms Race, if we can get those viruses to go into lab animals that have human things in them, well then we can make all of these vaccines and we'll all be healthy.

**Glenn Beck 10:51**

Now there's several allies to this, for instance, the Allies. Dr. Fauci has been a big believer in this the NIH, of course, which he runs. The NIAID, this is also a government agency. There's a guy I'm going to introduce you to in a minute, he is from South Carolina. He's a brilliant doctor, Dr. Baric, he plays a very large role in all of this, then there's something else the Eco Health Alliance, you're going to be

introduced to the guy who actually runs that Peter Daszak. This is a big funder of this war. The Wellcome Trust, who you'll meet at the end of this really frightening group of people, Moderna, and Pfizer, all other medical companies and pharmaceutical companies. Of course, if we could come up with vaccines, and we're the first to it, it'd be great, right? There are some people that are on the axis side in any war, there's an ally and axis.

**Glenn Beck** 11:48

So who's on the bad side? Well, the coronaviruses, you know, they don't want to be wiped out. This guy you're going to meet later, Dr. David Relman, he's just representing the scientists that are like, wait, this is really dangerous. We shouldn't do it. And there's a lot of those scientists that say that. Moderna and wait a minute Pfizer is on here, too. How can they be both an ally and axis power? You'll see right towards the beginning.

**Glenn Beck** 12:18

Now, in every war that I've ever seen, there's one neutral country, and they usually choose to be neutral. In this particular war, The Vaccine Arms Race, they don't choose to be neutral, they just don't know anything about it. Even though their life and their very walk of life, their society, culture, everything, even humanity itself, if this goes wrong, could be wiped out. But they don't know anything about it. The Switzerland in this case, is YOU. Until tonight. We begin with our first chalkboard, now, The Vaccine Arms Race.

**Glenn Beck** 13:02

Part 1. Okay, all right. So I have Jason who's our chief researcher and head writer, he's playing Carol Merrill at the chalkboard, today. Sorry, Jason. But he knows the story, and it's a very complex chalkboard. When does the the arms race first start? When did this all start?

**Jason** 13:32

Probably not when they think. November 2002.

**Glenn Beck** 13:36

2002? It's a long story for the love of pete, that's why its two hours long. The COVID-19 origin story is a tale of an international arms race, a mad dash to create a vaccine. And it doesn't begin where everybody thinks it does. But players and the people involved would like you to believe that it just kicked off last year. But all of this started in November 2002. Do you remember 2000, what was it 2005 The SARS outbreak in China? The Chinese did what they usually do, they hid the information for months before finally reporting something was going on in China. In the end, over 8000 people would be dead, spread out over 26 countries. This scared the crap out of scientists all over the world. The question on their mind was is this a sign of what is coming? Will the next big Coronavirus be the planet killer that they've been fearing? This is what kicked off the vaccine arms race because the scientific community split. Half of them said we've got to test everything and the other half said let's not make it, have you seen the movies before? It doesn't work out well. So in October 2005, three years after the SARS outbreak, Dr. Ralph Baric. He's an important guy. He's an American citizen, he's out of the university, I think of South Carolina or North Carolina -

**Jason** 15:05

North -

**Glenn Beck** 15:05

He published his progress. And this is it. This is his published report Development of Mouse Hepatitis Virus and SARS CoV Infectious cDNA Constructs, okay. This research was heralded in the day as a new era in Coronavirus genetics and cloning. Meanwhile, the United States government was making all of the moves that all of us missed. Just months after he published this research, December 2005, the government passed an emergency supplemental appropriations to address "hurricanes" in the Gulf of Mexico and Pandemic Influenza Act, because obviously the hurricanes and the flu go hand in hand, right? Nobody, nobody paid attention to this. This is why you have to read everything when the government publishes their little 20,000 page bills. This one, this is the actual emergency act, and this is on page 119. A little fact here that's tucked away. How would you know, it is the last page the rule of construction concerning National Vaccine Injury and compensation programme? Here it is. Guess what it does? It officially grants liability waivers to pharmaceutical companies working on emergency use authorization vaccines. So let's just say the pandemic happens. And the government says we got to have a vaccine and it's an emergency, and companies like Moderna and Pfizer ramp up vaccine research and production. Now, let's say you suffer from a side effect because it's an experimental rushed vaccine. Well, you can't sue anybody because this was passed. This is the government saying there's no lawsuits on this. None. Now that's good for the collective, but bad for the individual. But that's exactly how big government works. And that's how it's sold. It's interesting that this got pushed through under hurricane appropriations at exactly the same time the vaccine arms race was kicking off. It also signalled something else, again, that we all missed. The government was making moves now in tandem with giant pharmaceutical companies. I'll come back to that in a second and it's probably going to piss you off a little bit.

**Glenn Beck** 17:38

The government put protection in place. The Coronavirus vaccine arms race kicked into high gear because of it. In January 2007 Baric then published another paper, this one is A Mouse Adapted SARS Coronavirus Causes Disease and Mortality in BALB/c Mice. Mouse adapted, what is that? Okay, so, they go and they find a bat and they're looking for coronaviruses. And what they want to do is they want to put that Coronavirus from another animal into this animal, so what they do is they take this little bit of the DNA where is that? Well, I don't know where oh, I think I just oh, you know what, we don't get it out of the bat we get it out of their poop. So it poops it out and then we put it into a mouse okay. So this is what this is about. A mouse adapted SARS Coronavirus, okay causes mortality in mice. It was published in the National Institute of Health website. That's the NIH that is Anthony Fauci's place. Following the money, you'll notice that the government was fully invested in Baric's research with multiple grants from the NIAID, NIH and HHS. So we have Ralph Baric working out of a lab at the University of North Carolina with government funding from Fauci's place. But that's the start.

**Glenn Beck** 19:19

There was another lab, also in the arms race on the other side of the planet. This was the Wuhan Institute of Virology in China. While Baric's lab was using mice to clone the virus. A woman named Dr. Shi. Shi you might have heard of her, she's the bat lady. Together with Peter Daszak. This is an

important guy. He's an American. He is the head of Eco Health Alliance. They were busy looking for the source. They weren't worried about the mice. They were looking for the bat poop. They were looking for the coronavirus. In October 2013 they found it. Shi and Daszak found a treasure trove of coronavirus samplings in bat caves in remote China, including one they had never seen before. Well once Baric here in the United States heard this, he immediately reached out to Shi asking for its genetic data of the bat crap. She obliged. Well, she wasn't able to culture the virus in her lab. But Baric had "new era" Coronavirus research, and it allowed him to take the spike gene, that you've heard about, from this new virus and move it into the SARS virus that he had already made to see if it could be passed from bats, or from mice, to people. Will it make people sick?

**Glenn Beck 20:56**

Now, this is an important phase of the arm race, also highly controversial. I know you've heard about the dangers of gain of function research. This is the act of taking a virus from one animal, then taking a little piece from humans, and then put that with the bat crap that we just got out of there. So you have the human and you gonna put that into a mouse with the bit of the virus from the bat crap, and you're gonna put that into the mouse. Okay. And then we're going to see if the mouse gets sick because it has humanised lungs, for instance. Will this make it more transmissible to humans? If so, then they make a vaccine. If everything goes right.

**Glenn Beck 21:50**

Well, apparently somebody in the government got really spooked because it was October 2014, where the United States Government halted all of the funding on gain of function research. Dr. Baric was included in this. But guess what happened? He was given a waiver to keep going. So there's a new law, you can't do any of this, except for you. Not only that, the US government funded and continued to fund Peter Daszak and the Eco Health Alliance who was directing those funds directly to Dr. Shi in China, our money through a front organisation to Shi. Not all the scientific community was sold on this kind of research. I'm going to show you a conference that Dr. Baric attended in 2014. The highly respected microbiologist David Relman asked Baric directly if his work would involve gain of function tweaks that would increase coronavirus danger to humans. Watch.

**Ralph Baric 22:47**

At this point, I don't know of anyone doing transmissibility studies with the human coronaviruses.

**Glenn Beck 23:04**

Did you notice. That's not an answer to the question. He said, I don't know of anybody doing that. But that's not what he was asked. I'll save you from the boring science babble. His reasoning was it's just too hard. Well Relman caught that and pressed on. Watch.

**David Relman 23:22**

But just to clarify, your thought is that they aren't appropriate simply because they're technically not feasible right now, as described. Suppose you had a transgenic animal with human receptor, and there was evidence that there was some predictability for human to human respiratory transmissibility. Would that experiment be appropriate do you think?

**Ralph Baric** 23:49

Again, that's a difficult experiment so when you adapt the question Coronavirus to another species, it's not just the receptor interaction. In fact, there are three or four other genes that are absolutely critical for enhanced replication and pathogenesis. So just putting the human receptor in and making a transgenic mouse model and then trying to select use that as a model for increased transmissibility is not predictable, as far as I can tell at this time.

**Glenn Beck** 24:23

I mean I've always wanted a mouse with a window in it. Basically, what he's saying is, you can't just do those three little pieces there's so much more and it's so, he's not doing gain of function again because it's not possible. At the time. But did you catch the little slip of the tongue there? I want you to watch again.

**Ralph Baric** 24:45

So just putting the human receptor in and making a transgenic mouse model.

**Glenn Beck** 24:51

Hmm, didn't it sound like he was saying transgenic mouse and then caught himself and said model and that's really interesting, because guess what Baric publishes? This is unbelievable. November 2015. It's an announcement of a brand new Coronavirus Frankenstein, that can spread to humans. And how do they know? Because they made transgenic mice to bring it along. Wow, that's weird it's just a couple of months before he said it's impossible to do. Who were the hosts for this horror show? Dr. Baric and Dr. Shi from China. Scientists immediately began to criticise Baric and Shi's work as risky and dangerous. Do you remember when Fauci had his back and forth with Senator Paul saying it's stupid, you're stupid you call it gain of function, you don't even know what you're talking about? Well, let me show you this. This is an article, do I have it up here? Yes. Here's an article, debate over risky research. Engineered bat virus serves debate, blah, blah, blah. What is known as gain of function research. This article is one of the most highly respected journals out there. It not only calls it gain of function, not once, but two times. So if this was so risky for American doctors, how in the heck did Baric and Daszak think it was okay to have the Chinese Communist Party help? I have to ask that question because it had to be on the minds of people like Dr. Baric and Fauci over at the NIH if they cared. When Baric first published his new Frankenstein virus, I have to tell you, he conveniently left off one thing.

**Glenn Beck** 26:42

In April 2016, he issued a correction, the correction, just the small small fact that part of his research was done via funding from the US government to Peter Daszak and EcoHealth Alliance, directly to Dr. Shi in China. Hello, calling Rand Paul. Why did he initially leave that part out? What's with the correction? Don't worry, he left something else out that we'll get to in the last part of the show, and it's kind of a big deal. Now we reached out to Dr. Baric to ask him Why did you leave off the funding disclosure and the EcoHealth Alliance in 2015. So far, he hasn't called us back. By November 2017. Dr. Shi then took her collaboration with Baric and began publishing on her own. This is her research, but she was doing it now in Wuhan. All of these people were working on gain of function research on Coronavirus, despite the moratorium. But in December 2017, Fauci's NIH made it official and removed the funding pause. I guess they figured I mean, they're using our money anyway, might as well just be

open about it. We also reached out to Dr. Fauci and the NIH to get an on the record response for why they officially lifted the pause. No response.

**Glenn Beck 28:13**

Meanwhile, all of our players here on the chalkboard continued their collaboration, just to remind you, Peter Daszak, Dr. Baric and Dr. Shi, Wuhan, and the United States with Fauci. Here's an email from 2018 in January. This email shows that Daszak's EcoHealth Alliance paid Dr. Baric an undisclosed honorarium fee for an unknown service. Okay. I mean, if any of these people are ever testifying in front of Congress, and Congress actually can do something about it, this is probably something they should ask about. I mean, it's insane how much stuff is just flying under the radar and nobody in the media seems to care.

**Glenn Beck 29:02**

Can I ask you something? I don't care who you voted for. Do you feel the government or anyone in the government or the media is actually relating to you and fighting for you to find the answers to the questions that you and your family have? Who will ask these questions? We've reached out again to EcoHealth Alliance as well as Dr. Barrett to ask them what this was all about. So far, no response. But it goes on. One month later in February, Dr. Baric was coordinating with Dr. Shi to go to her lab in Wuhan. So you have Daszak, Baric and Shi. It's one big gain of function pyjama party, and the Frankenstein Coronavirus was the guest of honour. We're still uncovering new information almost weekly on the extent of the collaboration between Baric, Daszak and Shi with funding directly from the US government.

**Glenn Beck 30:10**

Last month, the independent research firm Drastic revealed this grant proposal that was made in 2018. Now, this draft proposal is quite long and it's requesting funding from DARPA. Now, listen to this, see if it sounds familiar. What this proposal is proposing is that DARPA would fund an idea where they inject bat Coronavirus, collected by the Wuhan lab into transgenic humanised mice, and then try to make vaccines. They even mentioned using test cave sites to do some of these experiments. Now, taking a look at all the players involved, you will see all of the people that are involved in this are all on the bandwagon to do that come hell or high water. Baric and Shi were right there along for the ride. I can't imagine the proposal reviewers over DARPA one of the biggest group of minds we have in America sitting around a table reading this and they say, wait a minute, hang on, I just want to see if I have this right. So this Daszak dude, he wants us to send him millions of dollars to do dangerous gain of function research, while they work hand in hand with the Chinese Communist Party. I mean, what could possibly go wrong with that? DARPA rejected the proposal. Look at what one of their reasons was, quote, "the team discusses risk mitigation strategies to address potential risks of the research to public health and animal safety. But it doesn't mention or assess potential risks of gain of function research. So even DARPA, is calling this out for what it is. So why is Fauci telling Senator Paul the exact opposite? And where is anyone to come out with any of these facts? Believe me, we haven't even started yet. Here we have one arm of the government DARPA rejecting this research because they say it's dangerous. And then the other arm of the government Fauci and the NIH saying here we'll give you money, funding through Ecohealth, Baric, and Wuhan. And if these quoting the rejection letter risks were being proposed to DARPA, who's to say that Daszak, Baric, and Shi didn't continue the experiments in

Wuhan anyway? This is another question that no one has been willing to ask, because we're shut down the minute you ask it. Well, we asked Peter Daszak if the experiments did go on in China, despite being rejected by DARPA. You can guess the response? He hasn't replied. No matter what scientist you listen to, they all say, and this is where they're gonna lose you, but furin cleavage site on the COVID-19 SPIKE protein, the thing that makes the virus so infectious to humans is still a mystery.

**Glenn Beck 33:19**

Okay? Basically, what they're saying is, we don't know where this came from. That's highly unusual for this long to go by, and we haven't found the animal. We haven't found the bat or the mouse. Now, people like Fauci say all of this is due to natural evolution. In fact, up until very recently, you were stomped out of existence if you said this looks like it was made in a lab. Others say all of this proves the virus was manipulated in a lab. The proposal actually explains it, the one to DARPA, quote, "we will analyse all SARS COVID S gene sequences for appropriately conserved proteolytic cleavage sites in S2 and for the presence of potential furin cleavage sites. Where clear mismatches occur, we will introduce humans specific cleavage sites. That basically what that means is, we're gonna take the stuff out of her, and we're gonna put that human stuff, basically the stuff that's in our lungs, and make humanised lungs in mice, then we're gonna find a lot of bat crap, we're gonna find some really crazy, really dangerous virus, and we're going to then introduce it into the mouse to see if the mouse starts to go cough cough. That's the mystery. And it was all set to be tested in Wuhan. Does anyone still really doubt the lab leak? Oh, yeah, but the proposal was rejected. Un huh. Except they were still getting money from Fauci at NIH through EcoHealth. All of our players that have been collaborating for cough cough cough, for years, all of them are there. Now for some reason, Fauci's NIH really, really, really wanted Dr. Baric's research, to go through extensive testing, and this relationship between Baric, Daszak and Shi is key. DARPA said no, but the Chinese Communist Party probably had fewer reservations. So the question is now why? Why would you knowingly, as Fauci, give NIH money to EcoHealth, knowing full well that it was being directed to the Chinese in Wuhan. Cough

**Glenn Beck 35:55**

It's almost like they have an ulterior motive here. Okay, if by some strange chance, you're just standing, you might want to take a seat because this is gonna piss you off. The Moderna mRNA technology, it's heralded as the next great leap in vaccines, a modern day marvel for the pharmaceutical and medical industry. Oh, did you buy any stock for Moderna. because boy, they really hit it out of the park. For eight years, people have been looking at Moderna who pioneered the technology. It was said to quote "revolutionise medicine and disrupt the pharmaceutical industry". Clearly, anyone to first nail down this tech was going to be very, very wealthy. Are you ready. This is 153 pages of the confidential agreement between Moderna and the US government, and it goes back to 2015. Jason, what was happening in 2015?

**Jason 37:10**

Erm Frankenstein Coronavirus?

**Glenn Beck 37:12**

That's right. The same time Dr. Baric and Dr. Shi published their paper on the new Frankenstein Coronavirus. In fact, let's skip down to page 104. It shows that the NIH and Moderna were collaborating

with Dr. Baric. Wow. His signature is on page 106 of the material transfer agreement. But let's get back up to the top of this specific agreement. The NIH appears to be transferring the mRNA tech to Dr. Baric . But look what they want to make clear quote "mRNA Coronavirus vaccine candidates developed and jointly owned by the NIAID and Moderna".

**Glenn Beck 38:03**

I'm sorry, I mean, I've seen ulterior motives before, but usually you see them coming. Did you know that the government co-owns the vaccine? Oh, by the way, this is not part of the Trump's thing, this is not part of that. This is 2015. The same government that is now mandating its use owns the vaccine. Is there even a precedence for this? The inventor of the polio vaccine, I know refused to patent it. The distribution was privately funded, the flu vaccine is an open source with global collaboration, you would think that this wouldn't be patented and held by the United States government. As of April, our government has paid Moderna \$6 billion to support the vaccine that they co-own. So if we own 50% of it, are we getting paid? Are we getting a discount? Where's that money going to? And if we're not getting money, why the hell would we have this agreement. Now keep in mind that Moderna is a company that attempted to bring nine previous products to market, including with this mRNA technology. All were unsuccessful all nine times. The most recent actually occurred right before COVID. Only once was Moderna even able to develop a product that advanced to human trials portion of development. So this is their first success. Or is it? I mean, how many more unlimited booster shots are we going to have to take, I mean, in the next 10 years, and this might be the biggest conflict of interest case in all of mankind.

**Glenn Beck 39:58**

Now okay, I thought, well, maybe the government's smart, maybe they're getting money, but why wouldn't they tell you this? What does the government gain here? Well, you don't need to look further than the great reset and their goal of public private partnerships on a massive scale. They are now working in partnership with private pharmaceutical companies. All these politicians, we all like those big pharma. They're in bed with them. They share ownership of intellectual property. They are now beholden to the federal government's whims and regulations. If they jumped, the only answer is how high. This is the precedent they are moving towards for all of society, not just in America, but the entire Western world. We're seeing it now in industries across the spectrum. The biggest and most frightening right now is banking and big tech. It's the standard everywhere.

**Glenn Beck 41:01**

Do you remember when we thought it was a little odd that the government shutdown the Johnson and Johnson vaccine, it was, it was really nothing to worry about. In fact, the others had the same kind of flaws. And when they shut this down, when they shut down Johnson and Johnson, everything went off the rails. People stopped taking the medicine, that's when we started saying, well we have to have a mandate. It never made sense to me, maybe it makes a little more sense since now Johnson and Johnson vaccine is an mRNA. The government owns the competitor to this. Why is the government been against so many, in fact, any kind of COVID treatment. They won't even talk about it, they won't talk about our natural immunity. And if things come up like hydroxychloroquine, and most recently, ivermectin, woah horse dewormer, they destroy it. How many people have died because the government is undermining treatments and your private physician, while simultaneously pimping a

vaccine that they own. Now they want to push their vaccine on everybody who has a heartbeat, including five to 11 year olds, the flu for five to 11 year olds is more dangerous by far than the COVID virus. This is a group that has almost zero risk from COVID. Why would they do that? Well, for a couple of reasons, because they own it, every dose administered must sound like the rapid churning of millions of cash registers. Also control.

**Glenn Beck** 42:47

I also find it interesting that the only treatment that Fauci hasn't smeared, is Remdesivir. Right? Well, who developed it? Oh, my gosh. Dr. Baric, he did, the same guy that did the, that's weird. But surely we didn't fund it. I mean, who? Oh, no, we did. Dr. Fauci's NIH funded the basic research. That's weird. Well, I mean, the only thing that would be weirder is if China and the Wuhan lab was involved in that. Certainly Holy crap, there it is. Wuhan Institute of Virology applied to patent the use. Wow. I mean, you can't make this stuff up. You can't.

**Glenn Beck** 43:33

Let's go back to the signature page of the transfer agreement. I want you to take a look at the date. 12/12/2019. Hmm. What was happening in 2019. What was happening in 2019, in December?

**Jason** 43:58

Is that when cases were first starting to pop up in China.

**Glenn Beck** 44:01

That's, get out of here, get out here that is crazy. That couldn't, oh yes, that's when COVID-19 cases were starting to be reported in a little place that none of us ever heard of. WUHAN, which ends the first chapter of this. Read into what you want, but that date takes us right to the next chalkboard.

**Glenn Beck** 44:26

The pandemic begins. Let's go to Steve. Steve, Am I blowing this out of proportion with the ownership?

**Dr Ryan Cole** 44:35

No, no, not at all, Glenn. And when you consider that the purpose of this gain of function research specifically, was to gauge what they called spillover potential. It's not even just that the methodology of this research is dangerous, but its explicit purpose in this case, was to see what would cause one of these bat coronaviruses to spill over into a human. So you're really talking here about the tempting of fate. It's not just a dangerous methodology, but that you're really creating a potential fait accompli here with a dangerous purpose at the exact same time. I've got here with me, and he'll be joining us for the Q&A that we'll be doing after you finish here tonight Glenn, Dr. Ryan Cole. He is a mayo trained pathologist. Ryan between tests and treatments, and studies and samples, is it over 150,000 samples or cases of coronaviruses COVID-19 that you've dealt with?

**Dr Ryan Cole** 45:38

That's correct, 150,000?

**Steve Deace** 45:41

150,000? In other words, you kind of know this virus inside and out.

**Dr Ryan Cole** 45:45

Yeah, for better or for worse, I do.

**Steve Deace** 45:47

Yes. And on purpose, I did not give you the rundown of what we were going to talk about here tonight. So I've been sitting here with you watching you as you react to this. And that's my first question. You kind of be the proxy for the audience here cos they're saying this for the first time too, your reaction to the initial dot connecting here done by Glenn and his team.

**Dr Ryan Cole** 46:10

I like to hail back to a quote from Mark Twain. And that's the man who does not read has no advantage over the man who cannot read. And I think in this era of us being shut down from information or choosing not to maybe dive deep into the weeds and find these interconnecting links, this is important. This is history. And this is history repeating itself. And this is groups of scientists taking advantage of humanity in ways that are obviously dangerous, and we're paying the price for their playing in the playground where they shouldn't have been playing. And I think it's very important to listen to what's being presented because this does connect the dots. This is science gone awry. But science gone awry intentionally for the benefit of a few to the detriment of many.

**Steve Deace** 46:58

Hmm, Glenn back to that second chalkboard.

**Glenn Beck** 47:00

Thank you very much. Okay, so we've introduced you to the players. We've taken you up to a place but there still is, there's no proof that this was lab that this happened in, that all these people we know that Dr. Baric, Peter Daszak, were working with Dr. Shi for years. We know that she was part of the DARPA proposal to continue gain of function research on a larger even riskier level in 2018, and DARPA said no. Now, we are told, when are we told officially that the pandemic begins?

**Jason** 47:54

December 31.

**Glenn Beck** 47:55

End of December? Okay. I've been curious about the months leading up to the time when the cases started being reported in China. Let me show you this is a research paper right here published in 2020, and it's all about the SARS COVID in transgenic mice. What's weird about this is this work, the paper came out in 2020, but the work was conducted in the summer of 2019. And it is exactly the kind of work that Dr. Shi was working on with Baric and Daszak, as in the exact same kind of research DARPA thought was a little out of bounds. Alright, so this was happening. They did all that testing, according to this in the summer of 2019.

**Glenn Beck** 48:51

Now, let me take you to September of 2019. This is months before the Coronavirus breaks out. There is a database in the Wuhan labs that catalogues all of the data. And then something happened all of a sudden, poof, everything goes down. Now this is an archived system to report for the Wuhan's lab database for September. You'll notice everything is green until the 12th then it's just all red. Nothing is happening. The database is gone. Well Shi says that the BBC Shi was on the BBC, she said to the BBC, that they did it deliberately for security reasons. Her claim conveniently is that they were hacked. Okay. I mean, maybe possibly, I mean, that happens being that the pandemic would officially begin three months later. I think it's fair to ask a couple of follow up questions, because I mean, it's a great place to hide things. Was there another Frankenstein Coronavirus hidden way in the database that her and her team had been working on. Now, just with that one thing that's, you know, that's okay so the database went down. But the same day that doctor Shi took down the database, September 12, a request was made for additional security. Okay, again, somebody hacks in, let's take her at her word, they hack in. All right? Well, we should have extra security. Something is going on in the Wuhan lab as early as September. Right after they're doing the research, and trying to get gain of function in mice. The virus database shuts down, security is called in, then four days later, here is the official Chinese request, they start scrambling to update their whole air handling system. This is the official Chinese document announcing the transformation of that system. That is weird timing, especially if somebody is trying to hack in and you're under attack, do you then go you know what we should change the air handling system. Whatever's going on there didn't deter the Chinese because the world military games kicked off in Wuhan just a few weeks later in October. Now this is where it gets really weird. 10,000 international athletes attended from more than 100 countries. One athlete that attended said the streets of Wuhan were quote, "nearly empty, and it was like a ghost town" end quote. Now when everybody arrived at the airport, strangely, the athletes had their temperatures recorded. They were also forced to wash their hands when they ever entered any building. This by the way, is in October. Multiple athletes later got sick with COVID like symptoms and spread it back to their families back home. This is a document here that reports this is leaked from the Chinese Ministry we found in research provided by Drastic, it shows that at least 10 hospitals in Wuhan were already receiving COVID cases in October. We've already got weird activity going on at the lab just a few weeks earlier, then the international athletes began showing up in Wuhan getting their temperatures checked at the airport, streets are vacant. One athlete says quote, "There were rumours that the government warned inhabitants not to go outside". So why did China push through these games? Keep in mind here that the Chinese Communist Party would not officially tell the WHO about COVID for another two months. But let's go back to the Wuhan lab.

### **Glenn Beck 52:57**

We have to add another hospital. Because November 3, three researchers from the Wuhan lab got so sick with COVID like symptoms that they had to go to the hospital. So something was happening from September through November. But China isn't playing nicely with the data that they've gathered from those early days. I wonder why. Is it possible that they're hiding Shi's Frankenstein Coronavirus that we helped develop. Meanwhile, inside the lab, this comes out December 3rd, this is another Chinese document where they make a request for an air incinerator on December 3rd. Whatever's happening at the Wuhan lab during this timeframe, it required the elimination of more medical waste than what they're used to. It's clear they were scrambling, something is going on at the Wuhan lab. The researchers are getting sick with COVID like symptoms. COVID cases are popping up all over the city.

But still China refuses to say anything and not only that, they were about to shift into full on cover up mode.

**Glenn Beck 54:12**

In late December, a Chinese doctor working at a Wuhan hospital warned some of her colleagues on a group text that SARS like virus was breaking out all over the place. One of the doctors in the group posted the warning on Chinese social media and it started to spiral. Both doctors were threatened by the government. Doctors and scientists analysing the virus were ordered to stop testing, destroy samples, and suppress the information. By that time the cat was out of the bag and China finally reported the WHO on December 31 that indeed Houston there is a problem. But they withheld key information. Officials from the US the CDC travelled to Wuhan on January 8th to see what was going on, but the Chinese kept it quiet. People in the hospitals were contracting COVID and others by infecting other patients, and other infected patients were infecting others. In other words, China knew at that time that COVID spread from human to human transmission. And why wouldn't they? Doctor Shi had been working on similar viruses with Dr. Baric since at least 2013. They knew. The CDC however, bought it. Did they? And the WHO sent this tweet six days later, quote, "preliminary investigations conducted by the Chinese authorities have found no clear evidence to human to human transmission of the novel Coronavirus".

**Glenn Beck 55:53**

How many lives were lost? How many people died directly from this lie by China? How many? After all of this, it seems pretty obvious that China was involved in a cover up. But it wasn't just to save face. As I've shown you, the Chinese scientists have been collaborating with US scientists and receiving US government funding on their experiments from Fauci and the NIH through EcoHealth. Even DARPA, and many scientists have said this is too risky and too dangerous. The Chinese knew it and tried to cover it up. I wish it stopped there. I did. But there's a lot of people here in the United States that knew this as well. People like Dr. Fauci and Peter Daszak, When word of the pandemic started coming out, their first thought was not you or your family, they didn't think that they had to protect you. Their first thought was to protect the secret.

**Glenn Beck 57:58**

I want to urge you to get all of these documents they are all available online. Can you put up the, there it is [www.blazeTVspecial.com](http://www.blazeTVspecial.com). All of these documents did we include the original Chinese or just the translation there?

**Jason 58:18**

No they're the original Chinese but if you use Google you can translate it.

**Glenn Beck 58:22**

And it's so important. I've done controversial specials in the past for many, many, many years. And we had the time to be able to put up with the nonsense, it's a conspiracy theory, because there were things to come. This is happening right now. They are farther down this road than you can possibly imagine. And I would ask you if you're somebody who is watching this cos your friends said, you gotta watch this and you're like I hate this guy. Ask your friend or just look me up Glenn Beck conspiracy theories. And

you will see that it was a conspiracy theory when I said that we were going to have a banking collapse in 2008. It was a conspiracy when I said Osama Bin Laden is going to be responsible for buildings, bodies and blood in the streets of Manhattan and he means it and you got to pay attention to it. When I said that in 1999, it was a conspiracy theory. We know what happened. We know what happened when I gave the conspiracy theory that the Middle East was going to melt down and it would spread. There'd be an Arab spring that wasn't so good conspiracy theory. All of these things that I have talked about have been right, the latest special which was, of course, a conspiracy theory, on the impeachment of Donald Trump, I went into that fully expecting that there would be something that Trump had done with the with the Russians that looked bad and whatever. I did the research, we spent months on that research and countless amounts of money. And now what was called a conspiracy theory is now being verified by the federal government right now. All of those chalkboards were right. The people who are calling it a conspiracy theory are the people in the media and the people in the media, it's quite amazing, one of the arguments against me has been, well, if this was really happening, how come he's the only guy talking about it? I don't even think I have to answer that now, do I? Of course, we're the only ones talking about it. Us and a small handful of other people. They are part of the problem in the mainstream media. Now, if you still trust the mainstream media, good luck. Good luck to you. If you don't, and you don't trust me, who do you trust? Who do you trust? Do you trust yourself to be smart enough to read these documents yourself, and then do independent, none of this is from me, these are all legitimate documents from the source, you can see and read all of them yourself. I don't ask for your trust. I ask that you trust yourself, you know something isn't right.

**Glenn Beck 1:01:53**

When you see the third chalkboard, you're going to know what it is. But you have to be able to, it's not enough that we have done this research, this is the truth that I have found and my my partners here have found and other researchers around the world have found. This has been 600 days of work. Two years of work on research. But you have to make it yours. Which means to be a good citizen, you have to do more than listening to a boob like me tell you about it. You have to do the work yourself. Make it yours. Because it's not good enough to say I don't know, I just watched the special and he was talking about it. You have to have it and know that it's true yourself.

**Glenn Beck 1:02:48**

Alright, let's go to the third chalkboard. There are three narratives surrounding this story. 1. COVID was a lab leak, 2. COVID is a natural virus jumping from animal to human, and 3. the US might have been involved in some way. Alright, both narratives one and three at various times, could get you deplatformed, certainly will get you ridiculed and mocked merely for asking the questions. Remember, the lab leak theory has now gone mainstream. And after seeing everything I just showed you, I don't see how anyone could doubt that that's at least a legitimate question and a legitimate line of thinking. Narrative three is now going mainstream as well. It can't be denied anymore. Although Dr. Fauci with Senator Rand Paul, he said, quote, "I totally resent the lie that you're now propagating." He actually called Rand Paul a liar. And what do we do? We sit there and if you're on one side of the political spectrum, you root for Rand Paul, the other side you root for Fauci and you don't know the truth about any of it. The NIH now is saying it was all true. So what is Fauci then lying about? Narrative 2 is the only constant this entire time, and it was pushed rigorously by people like Fauci, his colleagues and the Chinese and that's interesting, because the line they've been shoveling instantly absolves them from

any culpability if there was an actual lab leak, or any US involvement. That's the only one that absolves all of this. The problem is, is you know if it came from an animal it would come from a bat. We can't find a bat that has COVID-19 in it. And in fact, we have taken COVID-19 and we've tried to put it into a bat, and the bat rejects it, it doesn't manifest in the bat. So if it came from a bat, how come it won't manifest in the bat? This is highly, highly unusual. Researchers now are saying, I don't have an answer here other than lab leak.

**Glenn Beck** 1:05:29

What if I could show you that Fauci's first reaction to COVID was not to protect you, but to protect himself and those who have been working on the Frankenstein Coronavirus for almost a decade? Would it change anything if you found out that all of the people that said don't look at the Chinese lab, it's a natural phenomena, listen to us get another vaccine? What if I could tell you and prove to you that they, the very same people heavily invested in gain of function research in Wuhan are those people that are now trying to give you another shot of a vaccine that the government co-owns?

**Glenn Beck** 1:06:11

Alright, so let's pick this up. Jason, let's start the day that China finally admits there is a problem. This is December 31st, 2019, right?

**Jason** 1:06:21

Pandemic day.

**Glenn Beck** 1:06:22

Okay. These are the Baric emails obtained by a FOIA request Freedom of Information Act, you have a right to know. Now, here's what's really interesting. Many of these emails were redacted when they were set up because they had sensitive information in it. But there were like, I don't know sometimes 25 people on the CC list. What if you could take the Fauci emails and compare them to the emails from all the other people that were CC'd and see if they're redacted in the same place, and when they're not piece together one full email. That's what researchers have done. And here's what we found.

**Glenn Beck** 1:07:15

On December 31st, the official day of the pandemic, the first official day, Dr. Baric, sends an email to his buddy, Peter Daszak, and he says, Hey, have you heard any news on this? Now, if I'm those guys, and I've been working with Dr. Shi, and it's in Wuhan, and I know what we've been trying to do, you got to imagine how the news of an outbreak was being taken by these guys. Here we have an outbreak of a virus that is similar to the one they've been working on popping up directly at the location where they've all been collaborating. I mean, I'd be a little freaked out. So Daszak responds to his people at EcoHealth that they are reaching out to, I love this, "good sources" in China. I wanted to put somebody up on the chalkboard, but I'm not sure who he thinks are good sources in China. So I mean, maybe it's not them, probably not. But who else are good sources.

**Glenn Beck** 1:08:24

Fast forward one week, January 6th, now it's time for Fauci's NIH to hit up Daszak. The subject line in this email is Wuhan Pneumonia. And the purpose was to find out what Daszak's contacts in Wuhan.

Obviously Dr. Shi and the Wuhan lab were saying, he responds with quote, definitely focusing attention on this one, Erik. I spent New Year's Eve talking with our China contacts. I've got a lot more information, but it's all off the record. Wait a minute. Let's see if I can get my arms around this. So the guy who's been the front man or the middle man for the money between Fauci and the Wuhan labs, why is he corresponding with a Chinese contact, Dr. Shi, and why is it off the record in an official NIH email? We got a pandemic.

**Glenn Beck** 1:09:26

Let's put it into context, shall we? Do you remember my outbreak chalkboard earlier in the show? Strange things were happening at the Wuhan lab as early as September athletes reported other strange things were going down in Wuhan at the World Military games in October. Then they started to get sick. Official Chinese documents show the hospitalizations from the same month in October. Researchers at the Wuhan lab are getting sick and hospitalised in November. Now I'm just spit balling here but maybe that was some of the "off the record" information. Well that and, yeah, I mean, we've been working on this kind of virus and the Chinese lab, you know, at the same place of the outbreak. Oh and by the way with US money, but don't worry, the NIH owns the patent for the vaccine. Let's fast forward now January 31.

**Glenn Beck** 1:10:19

At this point, we know that Dr. Baric was talking to Daszak. Daszak was talking to his sources in China. And he was looped in with off the record information that he was then transmitting to Fauci's NIH. So we have most of our main players in contact, they all know something and are worried. But on January 31st, Fauci sent this email to two colleagues, Jeremy Farrar and Kristian Anderson. Now this is when it gets really interesting. Anderson is a California biologist, and Farrar is the head of the Wellcome Trust with two L's. This is one of the largest private funders of medical research in the world. They have kind of a uncomfortable dark history with eugenics. Yeah. So the combination of Fauci controlling nearly \$4 billion in grant funding through the government and Farrar through private funds, it's massive. We already know, Fauci was funding the Wuhan lab. We also recently found out that he was funding experiments that killed puppies in a gruesome way. So what else was getting funded through government and private funds?

**Glenn Beck** 1:11:41

Well let's go back to the email, shall we? Fauci forwarded this article in an email. It's a medical research funder, that's where he sent it, and also to Anderson the virologist. Mr. Anderson. The article mentions or references the work that all of our vaccine arms race players doctor Shi, Daszak, and Baric all of them. And investigating the origin was the main topic of this article, and it clearly hit a nerve with Fauci. It set off a chain reaction with all of our players. Here's a quote from the Fauci email. This just came out today. You may have seen it. If not, it's of interest to the current discussion. I'm curious what discussion? Maybe the off the record conversations being held between Daszak and Fauci's, NIH. Mr. Anderson responds, quote, "I should mention that after discussions earlier today, Eddie, Bob, Mike and myself all find the genome inconsistent with expectations from evolutionary theory". What does that mean? That means this was lab made. Now as you can see on the NIH website, the virus was sequenced two days prior, they all had an opportunity to analyse it, and the consensus was at that time

that COVID-19 had been manipulated in a lab. Now that's hard to measure the panic in an email, but that's basically what ensued.

**Glenn Beck** 1:13:22

The very next day, February 1st, Fauci sent his deputy an email, quote, "it is essential that we speak this AM. Keep your cell phone on. I have a conference call likely be over at this time. Read this paper as well as the email that I will forward to you now. You will have tasks today that must be done". The email he forwarded was the same article that questioned COVID's origin and that mentioned all of our players. Now take a look at the attachment that Fauci added to the email. Baric, Shi and all Nature Medicine, SARS gain of function, the email subject line was Important. He wanted to keep his phone close, and to get a read on what Baric and Shi had been doing since 2013, and I'll add with the NIH funding through Daszak. Now take a look at the deputy's immediate response quote, "The paper you sent me says the experiments were performed before the gain of function pause, but have since been reviewed and approved by NIH. Not sure what that means since Emily is sure that no Coronavirus work has gone through the P3 framework. She'll try to determine if we have any distant ties to this work abroad". Panic. Sorry, let me play this for you one more time.

**Dr Anthony Fauci** 1:15:03

Senator Paul, with all due respect, you are entirely and completely incorrect that the NIH has not ever and does not now fund gain of function research in the Wuhan Institute.

**Sen Rand Paul** 1:15:19

Do they fund Dr Baric?

**Dr Anthony Fauci** 1:15:22

We do not fund gain -

**Sen Rand Paul** 1:15:29

Do you fund Dr Baric's gain of function research?

**Dr Anthony Fauci** 1:15:29

Dr Baric does not do gain of function research.

**Glenn Beck** 1:15:30

Does not to gain of function research. Everybody was talking about it in 2015, Fauci was sending his deputy urgent emails with documents that had gain of function in the description. Now, how does he actually deny this to Rand Paul or anybody? They then scrambled to see if they had any, quote, "ties to this work abroad". They have researchers just like I do, and I'm sure they're very capable. I hope they are. So surely, they went to their grants and saw this like we did. I'm sure they went to their own website where Dr. Baric and Dr. Shi published their little Frankenstein Coronavirus research. Check out the acknowledgments section. Quote, supported by grants from the National Institute of Allergy and Infectious Disease. USAID-EPT-PREDICT funding from EcoHealth Alliance. Hmm. There was a lot more funding. And I could go on but the evidence is clear. Did they have any ties to this work abroad? Doctor Shi is listed on the project. EcoHealth working directly with her. US taxpayer funds from the NIH

go to EcoHealth. Then they go to Shi. Taxpayer funds are all over this. Course we reached out to Dr. Fauci we want to be fair, the NIH we reached out to them to get an on the record response for why they officially lifted the pause. But so far, we have not received a response. Panic.

**Glenn Beck 1:17:23**

Fauci and Farrar, may be the two largest grant funders for medical research like Baric and Shi's, organised a meeting the very same day. They included some of the most influential virologist they could muster including Kristian Anderson. Now this is important. Two days prior, he said COVID looked like it was manipulated in a lab. Anderson was to give the meeting a "summary" and Farrar was there to discuss the next steps. Now, I have to assume now that everybody in the meeting was very aware that Baric, Shi, EcoHealth Alliance and US government funding was all wrapped up into a nice little ball. They knew Baric and Shi had the tools to make a coronavirus more transmissible to humans. So what would those next steps include? Now, in a normal world, those steps would probably include coming clean about what really happened, and my theory is if they actually would have said something right then they'd have lumps to take, but it wouldn't have been a very big deal at the time. I mean, they take their lumps of a full investigation on what really happened at the Wuhan lab and we would have moved on really I think. Most of us would have been more receptive to what was going on, if they would have handled it that way. But that's not what happened.

**Glenn Beck 1:18:54**

Let me show you what they did do. Here's a letter that was issued just two days after Fauci's conference call on February 3rd, by President Trump's science advisor, Kelvin Droegemeier. He says, "I'm writing to ask the National Academies of Science, Engineering and medicine to rapidly examine information and identify data requirements that would help determine the origins of 2019 COVID". Sounds good so far, right? But listen to the conclusion, "specifically from an evolutionary structural standpoint", so he wants them to investigate and find out but really concentrate on anything other than the lab. Every email leading up to this announcement seemed to suggest that gain of function research and that COVID was being manipulated in the lab was, if not the consensus, at least something to be seriously concerned with. But now we have Trump's Science Advisor mandating that all investigation should be focused on COVID being natural or evolutionary.

**Glenn Beck 1:20:09**

First of all, how can all of these people claim to be scientists, they are being told what to investigate and what not to investigate all the options and data. And second, there is no way President Trump was read in on this. So that leads me to believe that this is collusion between Fauci and the President's Science Advisor specifically to keep the President in the dark. Now, to be fair, we reached out to Droegemeier and we asked him to clarify, he actually responded so that's a point in his favour. He said that the wording specifically, as pertaining to the virus being natural in no way limited the investigation to that specifically, but I still find this highly suspect. In the last paragraph of his original letter, he restates that the investigation is needed to quote, "understand the evolutionary origins of COVID-19 and more effectively respond to both the outbreak and any resulting misinformation. Now I wonder what misinformation he's talking about? Because all of this kicked off after an article mentioned gain of function research involving Baric, Shi and Daszak with Fauci funding.

**Glenn Beck 1:21:32**

The letter goes on, requesting a meeting of "experts" to start investigating. Now, we all know how the government goes, that meeting what happened three months later. Now, actually, all of these experts got together later that afternoon. I mean, it's almost like they had everybody ready and coordinated maybe during you know, that conference call February 1st, that panic. The meeting was run by the head of the National Academies of Science Andrew Pope, the President's science advisor, Kelvin Droegemeier, and guess who else? Anthony Fauci. Now, I hate to keep pointing this out, but just two days ago, Fauci was at the centre of panic mode, sending out documents and articles that showed a clear money trail from gain of function researchers in the US and China directly to Fauci's NIH.

**Glenn Beck 1:22:33**

Now he's headlining a government emergency meeting just a couple of days later, not merely suggesting, but mandating an investigation to quote, "understand the evolutionary origins of COVID-19". So let's call this for what it is. This is what's called controlling the narrative, a narrative deemed too dangerous for people like Fauci and those at the top of the food chain that were on the verge of being outed. Now just think about what we were facing back in February 2020. All of this was going down. We were facing lockdowns, mandates, no idea how many people would die. The Democrats were making this issue their main campaign battle cry. They had to frame everything as a problem of Trump's making. There couldn't be any blame shifted anywhere else. It could not be China's fault, and sure, the heck could not be enabled by a career bureaucrat, and reckless scientist. Believe science don't question science.

**Glenn Beck 1:23:42**

It had to be Trump's fault. And two of the three men directing this propaganda campaign and make no mistake, as you will see, that's exactly what it is. They were supposed to be part of Trump's administration. Look at all of these facts. Is there any other way to describe it other than Fauci and the President's science advisor, colluding behind the President's back withholding information from him? Fauci has already been brought in front of Congress and Rand Paul caught him in a bold faced lie. Fauci will testify again. But it's probably time to bring in the former President's science advisor as well. Just a few couple questions, like, did you withhold information from the President? Did you ever lie to him? That's when we'll get it started. But it's too clear that the right people haven't sat in the hot seat yet.

**Glenn Beck 1:24:39**

Okay. Back to our timeline. One day later, after this meeting, it's February 4th, and the National Academies of Science responds to the President's science advisors letter. Even though he was at the conference, he gets this letter. Now remember this is less than 24 hours since he has said, Hey, we should have a meeting with all of the experts, and we should really focus in on what the cause is. Less than 24 hours this comes in in a nutshell, it says their little collection of experts has deemed COVID as consistent with natural evolution. Really? No kidding. They were mandated to come to that conclusion. They held a meeting to come to that conclusion, and most likely coerced by Fauci who just days prior seemed absolutely panicked. The letter was produced by the National Academies of Science director, Andrew Pope. And in this email chain, it shows that the conference attendees colluded with him to get all of the wording correct. Now, take a look who attended this conference? Who was involved in this

narrative. First, Kristian Anderson. Now wait a minute, just a few days less than a week has gone by where he said on January 31st, that COVID-19 was manipulated in a lab. Then Ralph Baric, the actual father of the first Frankenstein Coronavirus, who had been working with Dr. Shi at Wuhan, the guy whose signature is on the Vaccine Transfer Agreement owned by Moderna and the US government, the guy who would later do the research on the only government sponsored COVID treatment Remdesivir. Oh, and there was somebody else there. Peter Daszak, do I even have to explain that one. Nearly all of the attendees had a dog in this fight. Some, Baric and Daszak had direct ties to the Wuhan lab, and years of published data on gain of function research. There were no dissenting voices. This was a major shot across the bow to anyone looking into the lab leak theory. Any scientist that was looking for funding would have to stay in the narrative. The world's largest public grant distributor was Fauci, the world's largest private distributor of cash was Farrar and they were leading the charge.

**Glenn Beck 1:27:28**

Okay, so after that meeting, and after that letter, the assault on "expert opinion" papers and science journals commenced, not a week later, no, no, no. February 19th Peter Daszak he actually wrote this letter published in The Lancet. He said, quote, "we stand together to strongly condemn conspiracy theories suggesting that COVID-19 does not have a natural origin". Now in this version, there was zero mention of his insane conflict of interest here. And I say this version, because The Lancet was later forced to amend this to recognise the competing interests. But by this time, this little correction came out, the damage has already been done. The narrative took centre stage and never left it. A few weeks later in March, Kristian Anderson also came out, did a complete 180 and published this paper in Nature Magazine, one of the largest and most respected science journals in the world. The guy who privately told Fauci that the consensus upon all of the scientists that he was talking to was that COVID was manipulated in a lab. He goes to that meeting, and now he's saying it's natural. Well, it's convenient, but not nearly as convenient as about what was to happen next.

**Glenn Beck 1:29:02**

A few months later, in August, both Anderson and Daszak were rewarded by Fauci's NIH with millions of federal funding. So the guy who was the only dissenting voice, he changes his opinion and he gets millions. What a good little soldier. They get all the spoils. And this was the message to anyone else out there who might get a little froggy, looking into the possibility of a lab leak or anyone that followed the money trail back to Fauci in the government.

**Glenn Beck 1:29:44**

You know, they now say that scientists are divided over where COVID came from. And now you know why. Do you remember what I said Dr. Baric corrected his 2015 Frankenstein Coronavirus research a year later, adding in funding from the US government to Peter Daszak, and EcoHealth Alliance directly to Dr. Shi in China. I told you at the beginning of the show, he left something else out that he didn't upload, and he caught the mistake and he corrected it. What he left out was, he didn't upload the virus. So when he wrote that thing, when was that Jason, can we open up all the chalkboards please? He amended this in May of 2020 and issued a correction. Now, wait a minute, that's something that he did in November of 2015. So he corrects his first mistake of leaving out who funded it? He corrects that in April, the next year. And then we have to wait all the way until May 20 to when he finally uploads the virus? Is it the same one that he worked on in 2015? Was it similar to Dr. Shi's in Wuhan? Why did he

go outside the protocol to begin with? I think I know a few senators that should ask these and probably would love to ask these questions.

**Glenn Beck** 1:31:28

We asked Dr. Baric to clarify if the virus sequence he left off in 2015 was the same he uploaded in 2020 five years later. We also asked him if it was standard procedure to include all this data in scientific publications. You know the answer already, we haven't received a response. Okay, there's one other thing. And I find this incredible, incredible that we've missed this.

**Glenn Beck** 1:31:57

And do you remember when I told you about December 12th when they signed that deal with Moderna. Okay, the government said we want to first make sure that no lawsuits can be had, then we want to partner with Moderna to be able to make the vaccines. Now, they said that Moderna they had this opportunity here, November 2015. That's when that contract was proposed. Okay, so that's fine. But then it wasn't until December 12th, four years later, that they actually signed the deal. Now, I've been through many, many high level negotiations, but I've never seen anything that started four years before. Coincidentally, once they find the Frankenstein virus, and then they negotiate for four years, and what a coincidence, they sign it just before the breakout of COVID. That's weird, isn't it?

**Glenn Beck** 1:33:23

Let me just go over this quickly, just so you can really understand it, the important parts. The people you need to know. Dr. Ralph Baric, I'm not assigning ill intent to anybody at this point. These people actually believe that they should check all animals for all viruses, and they should find a vaccine for all of them. So we'll always be prepared. Okay, I think that's insane, very dangerous, but then again, I've been to the movie theatre before. So they actually believe this stuff. Doctor Shi, the bat lady, Shi and Baric and Peter Daszak all are in this through the entire thing. That is America and China through a corporation that is being funded by who other than Dr. Fauci's NIH. They did gain of function research. They paid for it. Fauci's people paid for it through EcoHealth.

**Glenn Beck** 1:34:46

2015 gain of function. There's lie number one, then this strange hey let's partner with Moderna. I don't think this is normal, I'd like to know did we cut a deal to where we own it, but we're not getting any money for it now that is being sold. I mean, I kind of feel like if this would have been done with Trump, you'd kind of go, well, at least we're making money, huh? No, no, first of all, we shouldn't be making money on something that is this dire, right? We should be openly giving it to people. But it was paid for all of this research paid for by you, all of the research to create a Frankenstein monster, and then all the money to develop this, it was paid for by you. If we are getting paid, where's the money? Where's it going? My feeling is it's going to fund more of this (points to Frankenstein virus).

**Glenn Beck** 1:36:01

I said at the beginning of this show, COVID-19 biggest story in the history of the world. It has affected every aspect of our life. Public private partnerships, Coronavirus, Frankenstein monsters, a partnership with China. All of this stuff you can look at, when you start to go into here it starts to get dirty. But you can at least say they were trying to do the right thing. Once you get into this, something was going on.

And the fact that Moderna started the negotiations with the United States coincidentally, the year we found the virus, and then they sign it coincidentally, at the same time. I don't buy that. I just don't buy that.

**Glenn Beck** 1:37:01

But the really disturbing part is the third chalkboard. I remove Jesus and his mom, because I don't think they belong there. The really disturbing part is how you've been lied to. And how you have not been able to even ask any questions. Remember, we couldn't even mention the theory of this until about, what four months ago? Why? I can tell you, they may think it is because it's the best thing for humanity. But I don't know about you. I'd like to be involved in that conversation. I didn't vote for representatives, and then just let them do whatever they want and keep secrets from me. I'm very bothered by the fact that we are a co-owner of that. Now, it could be [a] simple explanation, but this is unusual. We don't do things like that. We shouldn't do things like that. But this is the direction we're going public private partnerships.

**Glenn Beck** 1:38:31

This is the biggest thing that's happened all over the world. The people at the top their first response was to protect themselves. The deep state wasn't responsive to the elected president. This stuff has all been happening. How many people even in Congress know this. Fauci's legacy took centre stage over your health, your mom and dad's health, and now our children's health. Let that sink in for a minute. The Federal vaccine mandate is still being pursued by the government, even though the US Court of Appeals has paused it, said stop. If that goes through how many jobs will be lost? If that goes through, and we have even fewer workers that are going and showing up for work, how many more products will not arrive on the shelves. The mandate itself is a racket. The government co-owns the patent and turns around and tells everybody you don't have a choice. You have to take it. This government doesn't see us as objects. I'd like to say they see us as customers, but that's not even right.

**Glenn Beck** 1:40:00

24/7 you hear vaccine vaccine vaccine? What's going to be said about these facts? These facts which you can get yourself, please get them. You say anything outside of the narrative and you'll be shut down on places like YouTube. Are we still on YouTube? Still on YouTube? Can't believe it? How long will it last? By the way, I did a promotion for today's show on Instagram. I think I could fit more people in my office that viewed that at least when I was live. That's impossible. That's impossible. The algorithms are all stacked against. I know this research is right. And I know that what's been happening in our country doesn't feel right. And this does, it makes sense.

**Glenn Beck** 1:41:04

Let me show you some CDC these are Fauci's emails, Baric's emails, Baric's correction, these CDC emails. These CDC emails were recently released through a FOIA request. Apparently they were getting a little worried about the definition of vaccine in the era of mRNA technology that they co-own. Sorry, I can't stop saying that, quote, "right wing COVID 19 pandemic deniers are using your vaccine definition to argue that mRNA vaccines are not vaccines. I hate to ask this from the control room. But do we have the Bill Gates audio that just came out last week, the video where he was giving a talk? Okay, I want to show you what happened here. They are saying now that people are denying science

and saying this vaccine is not really even a vaccine. God forbid you say it's not an effective vaccine. But something came out from Bill Gates. Bill Gates last week said this

**Bill Gates** 1:42:26

The economic damage. No, the deaths, it's been completely horrific. And I would expect that will lead the RND budgets to be focused on things we didn't have today.

**Glenn Beck** 1:42:42

Listen to this.

**Bill Gates** 1:42:42

We didn't have vaccines that blocked transmission. We've got vaccines that help you with your health, but they only slightly reduce the transmission, we need a new way of doing the vaccines.

**Glenn Beck** 1:42:55

So we got a "new vaccine" that helps you with your health and barely blocks transmission. Okay, hang on, then that's not a vaccine. That's a therapeutic. This is yet it seems another failure from Moderna. Remember, they failed on everything before, and now they need the government arm to shut people up so it's not a failure. In fact, they've gone so far now, as defining a vaccine differently. This is how the CDC used to define it. "The act of introducing a vaccine into the body to produce immunity to a specific disease". Okay, you notice it says that it produces immunity. It's introduced into your system, and your body produces the immunity? Well, here's the problem, apparently, just us crazy right wingers, we know that people who get the vaccine are not immune. They can still get sick and a therapeutic, not a vaccine, a therapeutic will make it so it's not so bad, but you still can carry the disease, and you can spread the disease. So going off their own definition, their co-owned vaccine isn't really a vaccine. And if it is a vaccine, it's a crappy vaccine. Well, they couldn't have it that way, could they? I mean, we got to have customers. We are not only we're on a two track system, we want to make sure that everybody knows you answer to me, the government and Fauci and you will do what we say. They need to make sure that everybody sees that public private partnership is making that company very, very wealthy, even though it's kind of an iffy thing.

**Glenn Beck** 1:45:08

So the CDC, Facebook has just pulled the show. The CDC Ministry of Truth actually changed the definition to this, "The act of introducing a vaccine into the body to produce protection from a specific disease". Not immunity. Protection. That's a therapeutic. Now that they've changed the definition, crisis averted, go get your shot. I'm so disheartened. I mean, I expected [but] I'm so disheartened that Facebook. What is it here? What is it about the actual documents that they're afraid of? And why is Facebook so concerned with this? I mean, I'm just questioning, where did it come from? Do you think that's important as we look for a more effective vaccine? A more effective therapeutic? Wouldn't it be good if we knew the origin? It's always been important before?

**Glenn Beck** 1:46:36

Shouldn't we as human beings on the planet, not just Americans, but on the planet have a voice when we're talking about creating viruses in a lab, so we can find the vaccine? Some people will think that's

responsible. A lot of other people will think that's madness, that's madness. Why take that risk? Shouldn't we, as fellow human beings have a voice at the table? Or is it only the elites that can say that? This is the fundamental principle of America? You don't control me? You work for me. Now I hire you to make decisions, because I can't be up on everything. But this is a pretty big one. Not only did you hide it in a hurricane Bill, you hid the protection in the partnership that was coming for pharmaceutical companies, you're protecting them, so I don't have the right to sue them. Okay, maybe it's good for the collective cos that's what we have to do, I guess, never done it before, but I guess, but then you're protecting them and you're not letting me question things. You're not telling me, and I can't talk about things that are side effects.

**Glenn Beck 1:48:10**

When I watch TV and I see, you know, two people in a bathtub. First of all, who has two bathtubs, why, if you're want to have sex, maybe you should get into one tub, that's a different story. When I see that, and it's a 60 second commercial, at least 20 seconds demand from the government a must do in all of those commercials, they have to tell you about every possible side effect. But if you notice, we can't even talk about it's like there's no side effects. This is the perfect vaccine. Come on.

**Glenn Beck 1:48:56**

By the way, they're asking for even more of your money to keep doing everything I've been showing you tonight. The NIH wants a 20% budget increase. The NIH is Dr. Fauci. He is the highest paid person in our government. I'd never even heard of him before. And now after all of this, and all of this is true, he's asking us for another \$9 billion. I've got a couple of questions. How much of that will continue going towards risky research funding? Maybe research in countries like China who are clearly our adversary? How much of it will be used to cover your own mistakes and lie to the American people? Does anybody actually represent you? Is there not a single person in the mainstream corporate media that has the intellectual curiosity to follow any of this and just ask some legitimate questions, is there anybody? Is there anybody in the media that isn't in full lockstep with you being shut out on every decision and you must follow the plan? Is there anyone in the media that think that's going to work out well for them if they decide ever to question somebody who's in government. Once you've given the government that power, that's usually when in Russia, members of the press were curious suddenly get very, very sad and throw themselves off of roofs.

**Glenn Beck 1:50:56**

Lockdown, mandates, things we have never seen in America, lost loved ones, and loved ones that were lost, because of Governor's saying, you've got to take COVID patients, you got to put them into the nursing homes. No one is really held responsible for that. We have an open border. And yet, we're forcing American citizens to have this vaccine, but we're not requiring that from people who are coming into our country illegally. And we're giving them free bus tickets, or free aeroplane and free housing in another city. And they're doing that in the cover of night. We have supply chain issues. Do you think anyone? Anyone serious, you know who's in charge of of this, his job title is the Secretary of Transportation, this is all transportation. He took two months off, let me ask you something, if your wife gave birth, not an adoption, actually pushed that thing out and then was really suffering from it, and you had a job that was to try to solve the biggest transportation issue that we have had possibly ever in America, and time was of the essence, even with the postpartum blues and everything else that his

husband didn't have, because he didn't push anything out of anything. Don't you think even your wife you would go to and say, honey, I'm going to hire help. I will be here as much as I can. I will even work from home. But this is about the country. And we have to solve this now. And I'm the guy responsible for it. He didn't do that. He didn't do that. Why? Who's running this show? They're all covering their own backsides.

**Glenn Beck** 1:53:09

And that was the thing that we found at the very beginning of this pandemic. In a strange way, I want to thank Dr. Fauci for showing the country what they really think about us. They are people that only care about themselves. And people like us are a statistic. We're cattle, and they're the ranchers.

**Glenn Beck** 1:53:35

We're going into Thanksgiving and I would ask you this holiday season, when you get together with your loved ones, and the people that maybe you don't love so much, because they've been such a pain in the neck that you enter with malice toward none and charity toward all. And you sit down and you just listen to them with empathy. And you don't try to win the argument. You let them know first nothing will change your love cos your family and we have to love our family. And sometimes it's hard. I just had this conversation with my son recently. I love you. I don't want to right now but I love you. And I always will. But I just want you to ask a few questions. Here are the documents. Can you just look at them, and tell me what part of this makes you say I trust them, I don't need to ask any questions. Nothing would please be more than continue blasting the truth across the public airwaves to you. Unfortunately the hour is growing late and we need to end our live stream to YouTube in a few minutes, or we will lose the platform on YouTube, we might have lost Facebook now, I don't know what kind of punishment we'll get for that just for asking reasonable questions. I've already mentioned countless times before, not just today, big tech is part of that public private partnership. And they are in the middle of the great reset, build back better.

**Glenn Beck** 1:55:31

Every Congressman should be called every senator should be called by you. And tell them in no uncertain terms, you will never forget their name. And you will do everything in your power to campaign against them, if they give the keys the final pieces of this great reset puzzle over to people who do not answer to us and think they're above answering to us. Big tech is part of this. And they are determined to silence anyone who goes against their narrative. It's time for every American to choose. How much are you willing to put up with. And I'm not saying that you do anything. In fact, I strongly urge that if you say I just wanna go shake them, you don't do that, you don't do that. Because we lose because they want you, they need you to strike out.

**Glenn Beck** 1:56:40

We the people just need to stand up. Look at the difference of what's been happening with CRT. They know what's going on. And the media every day discredits themselves even more, I think they're at a 12% I'm not kidding, a 12% approval rating. 12% of the American people trust the media. Nobody's even watching them. But you need to send a very clear message. We do hear the truth. And we stand collectively as individuals. And we know the truth will set us free. And if we make mistakes, we will correct them. But they can't have you thinking that you are not alone. They need you to be ignorant,

because you're easier to control. They cannot have you rising up and demanding your freedom and liberty from their draconian edicts they need your big employer that's in on the public private partnerships to come, they need them to send a message to you you're not gonna find a job.

**Glenn Beck** 1:57:56

You know what, for the first time in my life, I can begin to relate to the last lines of the Declaration of Independence, Our Lives, our Fortunes, and our sacred honour. We've already lost our honour if we go along with the lies we're being told, and we don't stand up, not to speak is to speak. We're now being asked our fortunes. Most people don't have a fortune. And that's what concerns them. But people who do have a fortune, they don't want to lose it either. But I would rather lose my fortune than my soul. And if I don't stand up for the freedom of my children, and your children and my grandchildren and your grandchildren, I will lose my soul. We need to take the rest of this evening to our private network where we can ask honest questions.

**Glenn Beck** 1:58:54

If there's anything that you have seen tonight that you don't understand you'd like more clarity on [or] you have questions that you haven't felt comfortable to ask, I don't know of a person that is better than Steve Deace on this. Daniel Horowitz who is a wildly rational guy is here and the guy is like a computer, he stores everything. And also Dr. Ryan Cole are waiting eagerly to dive into what was revealed tonight and expand on the revelations, and to answer the questions on COVID you have been banned from asking. Let's go to Steve now. Hi, Steve.

**Steve Deace** 1:59:35

Glenn, if we haven't yet been banned from Twitter, I just want to throw my hat in the ring and get the hashtag. Glenn Beck didn't kill himself. I want to get that going here this evening. Can you go ahead and confirm for our audience you are having no suicidal ideations you have not recently considered taking your own life. I just think we should clarify that perhaps after the last two hour programme we just produced here on Blaze TV.

**Glenn Beck** 1:59:59

I am of sound mind and have a cheerful heart. I am more determined than ever. And you can throw me off the air, you can throw any of us off the air. But I know Steve, you and so many of us, if we have to go and walk because we don't have cars, we will walk from town to town and we will tell the truth as we understand it. They're not gonna silence us. They're just not. And that's okay if that's the game they want to play, but they are on the wrong side of the history of mankind. And as Rand Paul said, so assuredly, history will judge that. History will judge that. All right, we're gonna start with you. I do want to thank all of the people that have helped on this research. Ricky, can you give me, yeah, Charles Rixey. Charles Rixey is a guy who has really been helping us with all of this. He is part of a group of people who are just, I mean, they're curious, but some of them are scientists. Some of them are just good computer guys.
