Smart Meter Dangers.pdf; Microwave Power Density Health Effects vs Safety Standards.odt; Microwave Radiation Levels.pdf;

Hello,

This is not a scam or phishing email. This is genuine.

I am a mother of a 29 month old. I care about my family. I care about your family, I care about human beings and animals and nature, which is why I put so much effort into exposing lies where I see them.

As the evidence is shown in this video, [Smart Meter Dangers](#)

Watch free: Take Back Your Power, an award-winning documentary by Josh del Sol

Get the cold, hard truth about smart meters in this provocative film - now streaming at no cost.

and the video I transcribed, absolutely no worldwide Government, utility company, Ofgem, Smart Energy GB, or other regulators or sponsor of smart meters can rebut the evidence of harm from this radiation from smart meters that is being fitted on every home worldwide by so many organisations who believe the lie that they are saving the planet. Shame on Ross Kemp and Angela Rippon too.

Are you aware that when you encourage smart meters, you are actually putting you and your family at harm too.

To explain the final two papers I have attached,

And we now have vast amounts of published science on microwave radiation and health effects. The data we're going to look at are all published science, testing results, or public standards. At the bottom end of the radiation scale, of what's called power density or signal strength, is the minimum level at which cell phones will work, which was found to be 0.2 billionths of a microwatt per centimetre squared. Pine needles were found to age prematurely at 0.000027. At short-term exposures to 0.05, children aged 8 to 17 experienced headache, irritation, concentration difficulties, and behavioural problems. 0.1 is the bowel biology or building biology guideline for extreme concern. 1.0 produced sperm DNA fragmentation and a decrease in sperm viability in vitro. Also at 1.0, the science shows the following bodily effects can occur. Headaches, dizziness, fatigue, insomnia, chest pain, difficulty breathing, and indigestion. 2.5 saw altered calcium metabolism in heart muscle cells. 4.0 changes in the hippocampus affecting brain memory and learning. And at 6.0, DNA damage in cells. So, where are smart meters on this list?

Electrical Power Institute in December 2010 measured a single ITRON smart metre with pulses up to 7.93 microwatts per centimetre squared. Our own testing indicated approximately 8.0 with one metre. These tests are at a close distance, approximately one foot away from the metre, but an infant's crib can be just as close on the other side of the wall where the metre or bank of metres are installed.

Even though there are all these known health effects at levels far lower, Switzerland, Liechtenstein, and Luxembourg see fit to set the standard at 9.5. And China, Poland, and Russia, 10.0. This is the same level at which behaviour has been altered, producing reflexes of avoidance following 30-minute exposures. A room of 12 smart metres, very common and even a conservative number in an apartment building, tested at 19.8 microwatts per centimetre squared. This is hundreds of times higher than levels which clearly indicate harmful effects.

So, how can utilities and governments get away with forcing these devices on everyone? This is how. In Canada and the U.S. and several other civilised countries, the safety limit is set at 600 to 1,000 microwatts per centimetre squared. This so-called safety limit is literally tens of thousands of times higher than levels which are known to damage health, according to peer-reviewed published science.

Under court order, Pacific Gas and Electric admitted that their smart meters generate 14,000 spikes of communication per day. Utilities have often held that smart meters are not a problem because they communicate with the utility rather infrequently, maybe a couple of times an hour. That doesn't matter how frequently they communicate to the utility. What matters is how frequently do they generate radiofrequency fields. And clearly the utilities have been hiding the fact that these smart meters generate these radiofrequency fields almost continuously. They're pulses, but they're very, very frequent.

So according to PG&E's court documentation, the average smart metre is on for 45 or 60 seconds a day, but they've conveniently withheld from us that these 45 or 60 seconds are split up into 10,000 or more pulses, each at about 4.5 milliseconds in duration, emitting all the time, every few seconds, 24-7. And some metres are up to 190,000 pulses per day.

No doubt my email will probably be deleted, as is normal with cognitive dissonance, but whether you accept these facts as truth or not, those smart meters are damaging you and your family and children whether you realise it or not. The blood changes, that's why health effects are noticeable in so many people. Therefore, this 'green agenda' is sinister. It's absolutely nothing to do with saving the planet or reducing carbon. It's about weakening the human being into compliance, as the world is plugged into the smart grid.

At least be honest with the public. Your smart meters page doesn't even tell consumers the truth that they emit radiofrequency radiation very very frequently. Ofgem is the same. Smart Energy GB is the same. You are not telling people the truth. You are not providing the scientific evidence that these meters are totally not safe for human exposure. If they can kill two bee hives, what damage are they doing to humans? Be honest as a human being and do not hide behind your organisation name. Not everyone is stupid enough to not question this technology, and you, unfortunately, are being used to push this evil agenda to cause mass harm, disease, and genocide.

At least be honest and tell people the truth about what is being fitted on their homes. Otherwise it's not informed consent. It's deception.

Every human being can say no, does not have to play a part. I was just doing my job is not an excuse. [Smart Meter Dangers](#)

IT'S MORALLY WRONG and it is sin. But if all you care about is money, then go ahead and ignore this.

What will you say to the Judge of the Universe, Jesus Christ, when you stand before him? At least turn to Him for the forgiveness of your sins. Put your faith in Him that He died for you on the cross, he was buried, and he resurrected. He is a living God, the faithful God, the human God, the compassionate God who loves all, who died for all, but faith is required to receive that free gift of everlasting life. No works required. To repent is to have a change of mind.

God judgeth the righteous, and God is angry *with the wicked* every day. - Psalm 7:11

I am the way, the truth, and the life and no man cometh unto the Father, but by me. John 14:6.

Sadly, you are being used by Satan at the moment to fulfil this agenda of control under a green agenda lie, because he has always wanted to be like Almighty God, but he isn't. He is proud. He has lost. Don't let him take you down with him. And Satan is the richest person in the world, so he will buy people and industries who enjoy the wealth to commit this genocide upon human beings and animals.

Don't be a coward today. Stand up for human beings and let your conscience guide you towards what is right and true.

I have never believed the world is overpopulated. God told Noah to be fruitful and multiply, which means to populate the earth. These smart meters will make it a lot more difficult for couples to conceive (Satan's plan, as he is a liar, deceiver, and lover of death) and have healthy children, but you will have to take my word for it with the papers and evidence shown in the video and watch it. It's just under 90 minutes, and I've transcribed it as best I can with each speaker.

Regards,
